

Education

2013/08 - 2015/06 University College London Master (PhD Dropout), Computer Science
2011/09 - 2013/01 University of Edinburgh Master (with Distinction), Informatics
2007/09 - 2011/07 Wuhan University Bachelor, Electronic and Communication Engineering

Experience

2025/08 - Now Shenzhen Landray, Director of Artificial Intelligence

Enterprise Knowledge Governance and Hybrid Search Engine

- Following Lakehouse paradigm, the platform supports diverse data integration pipelines (e.g., SeaTunnel, Flink) and orchestration modes, including native DAG engines or DolphinScheduler
- AI enabled Unified Governance for structured and un-structured data. Heterogeneous search indexes including sparse and dense vectors, reverse index and aggregated metadata tables, connected with entity-based otology
- In-house developed search query parser enabling semantic tokenization. AI-friendly hybrid search toolset with accompanying skills allowing agentic search and advanced NL2SQL capability

Enterprise Multi-agent Architecture

- Building safe and efficient runtimes and sandboxes for enterprise multi-agent systems that compatible with Claude Code, OpenClaw, Hermes and more
- Develop built-in toolsets for efficient multi-agent orchestration including enterprise digital asset governance, agents and skills routing, runtime data authorization with AI reasoning

2025/02 - 2025/08 Shenzhen HQShuke Group, Director of Artificial Intelligence

Shuke-Cloud, AI Training and Service Platform

- Integrated Kubernetes cluster management; Containerized model training and inference with diverse backends (vLLM, SGLang, LLamaFactory, Unsloth); Image factory based on service templates; Low-code AI workflow
- Supporting data analytics platform with Lakehouse architecture based on Flink, Hudi, MinIO and StreamPark

Tripulse, AI Travel Agent with Deep Search

- Hybrid mobile app featuring LLM-powered traveling assistant with planing and guidance service enhanced by Deep Search. Integration with map provider (Gaode) giving real-time itinerary estimates and location infos

Multi-Modal AIGC Service Cluster

- Audio-driven avatar streaming with text-to-speech and lip-synchronization; Image customization (Text-2-Image, Inpainting, Identify, background, style, etc.); Video generation and 3D view synthesis

Research on Latest AI Advancements

- Reproducing experiments of DeepSeek-R1 based on the RLVR (Reinforcement Learning with Verifiable Rewards) paradigm; Attention mechanisms and their applications in Multi-Modal Fusion; Domain-specific LLM evaluation; Efficient training strategies (curriculum learning, activity learning, etc.)

2024/10 - 2025/02 Shanghai Shanda Group, AI Algorithm Engineer

Tanka AI, Enterprise Agentic Assistant with Long-Term Memory

- Lead development of core RAG components including: knowledge ingestion pipeline, semantic chunking, combining lexical and semantic retrieval, knowledge graph construction, graph-based multi-hop reasoning
- Our open-source agent framework OMNE achieved 1st place on GAIA leaderboard in 2024

Research on Frontier Models and Memory Mechanism for LLM

- Research on cutting-edge areas like Inference-Time Adaptation, Test-Time Training, frontier models such as Mamba and RWKV, RAG techniques like late-chunking, semantic ranking, etc.
- Model evaluation framework with a focus on long-term memory, going beyond Needle In A Haystack paradigm

Consultancy on Tech Vendor and Investment in AI

- Act as main contact, screened 20+ start-ups and vendors in China and US, with specialties in LLM pre-training and post-training, Agentic AI, RAG solution, Memory for LLM, Document Intelligence and Data Labelling. Finalized deals with six short-listed companies

2024/05 - 2024/10 Infmind, Co-founder

LLM Empowered Software Engineering Automation

- Project-scope code generation with Agentic AI and Search-Based Optimization. Combine static and dynamic code analysis. Utilize adversarial networks and mutation algorithms for vulnerability discovery and test enhancement. Achieve SOTA on Java Unit Test generation with optimal efficiency

2021/05 - 2024/05 Shanghai LexisNexis, Software Engineering Manager

Global Content-as-a-Service Platform with Advanced AIGC Features

- Research and development of AI services for Automatic Legal Editing featuring Sequential Labelling (NER), Text Classification, Summarization and Generation with fine-tuned Transformers variances (RoBERTa, BART, T5). Enable cutting-edge AI application like Automatic Legislation Amendment involving decomposing instructions and amendment consolidation with 95+% accuracy
- Develop content management platform featuring: Event-based workflow, Lakehouse architecture, In-house content versioning and text manipulation system, capable of automatic content diff logging and retrospective editing consolidation
- Develop web-based document editor featuring: WYSIWYG text/XML editing, AI Assisted Workflow, and Content Versioning Highlights

Global Search Engine with Enhanced Relevance and Performance

- Revamp company homepage search service(Solr). Responsible for all critical search performance components including Query Parsing, Recall, Pre-ranking, Ranking and Recommendation-based top pages enhancement. Achieved 98% sub-second search performance on billions of documents
- Research and develop multi-stage search relevance funnel featuring: Query Entity Recognition, Multi-Channel Recall, Multi-task Mixture of Expert (MoE) models, Learning-to-Rank and Semantic Ranking

Lexis+ AI: Legal Summarization and Conversational Search with LLM and Generative AI

- Research and develop conversational legal AI assistant able to answer user queries with validated references, and summarize public and private legal contents in precise language
- Enhance off-the-shelf foundation models (Claude, GPTs, Llama) with Retrieve Augmented Generation (RAG). Parameter Efficient Fine-Tuning(PEFT) including LoRA and P-Tuning. Design in-context prompts with Chain of Thought (CoT) and Tree of Thought (ToT) techniques. Design and implement multi-turn Dialogue State Tracking (DST)

2019/10 - 2020/04 Shanghai Bollore Logistics, Innovation Program Manager, Greater China

Intelligent Supply Chain and Warehouse Automation

- Lead China innovation and data science team on key innovation initiatives including International Freight Positioning, Smart Warehouse with IoT and Computer Vision, Warehouse Automation, Robotics Pick-and-Place, Predictive Freight Pricing, Blockchain for Supply Chain, Online-Offline (O2O) system integration

Innovation Community and Digital Transformation Program

- Serve as key contact for company-wide innovation and digital transformation. Manage public relationships with partners in the Chinese tech start-up ecosystem. Organize internal innovation community and workshops

2017/05 - 2019/09 Shanghai Richemont Group, Technical Project Manager

Global Multi-tenant E-Commerce and Phone Ordering Hub

- Full stack development including Frontend, Backend, Test Automation and DevOps, serving global business units with 52 region-brand combinations. Featuring Product Catalog, Shopping Cart, Promotions, Ordering Funnels, etc.
- Integrate with payment and logistics service providers in Europe, North America and Asia. Enable Mono-Repo and fast deployment with highly configurable and scalable architecture

Group Omni-Channel Digital Retail Middleware

- Refactor legacy E-commerce middleware with micro-service and containerization, integrating with new group ERP backend (SAP) and harmonizing offline retail to bring full O2O (online-to-offline) experience
- Develop principle service modules (Config, Registry/Discovery) and message broker. Lead cross-functional coordination between Retail, Treasury and Customer Service departments. Lead global teams based in Shanghai, Paris and Geneva

Global Social Network CRMs and Mobile Boutique

- Social CRM and Mobile Boutique mini-apps covering China (WeChat) and Japan (LINE). Design and implement system components including Real-Time Messaging and Customer Profiling and Segmentation

2015/11 - 2017/04 Shanghai K.N Capital/JIHAI Investment, Research Engineer

Multi-factor Stock Investment Research Platform

- Develop backtesting and analytics engine for intraday stock trading, with easy-to-use web frontend. Develop algorithmic trading system supporting various algorithms (TWAP, VWAP, GWAP)

Low Latency Algorithmic Trading System for Futures

- Develop algorithmic trading system interacting with multiple futures exchanges (SHFE, CCFEX, DCE) and their respective programmatic interfaces (Femas, CTP, Xspeed). Achieve full loop latency in microseconds. Develop market data aggregation and backtesting toolset. Research on high-frequency trading strategies based on Market Micro-Structure

2015/06 – 2015/11 London

BNP Paribas, Corporate and Institutional Banking, Tech Lead

Real-time Bond Trades Aggregation and Risk Analysis System

- Full stack development of Real-Time Single-Page Application. Optimize sorting and filtering algorithms, achieving real-time dynamic search and risk calculations on millions of bond trades. Scrum and project management
